

Sophia FinOps

Intelligent Cost Management

Technology expenditure represents a significant share of enterprise budgets, yet many organizations struggle to quantify it or ensure its accuracy. Supplier invoices are often fragmented, difficult to understand, and hard to validate. And as organizations grow, how do you ensure EBITDA is not lost to billing errors, unused services, or misaligned contracts?

Sophia FinOps for Intelligent Cost Management provides visibility, control, and compliance across a company's technology spend. This carrier neutral solution reconciles contracted rates against billed charges and dynamically links technology inventory to carrier invoicing. The result is an accurate baseline with ongoing oversight.

Move beyond invoice processing to active optimization and disciplined spend governance.

The business impact

Visibility

- Reduced financial leakage
- Improved budget accuracy
- Improved reporting
- Faster planning

Single source of truth

- Reduced auto-renewal waste
- Negotiation leverage
- Consolidation opportunities
- Lower long-term cost of service

Scalability

- Reduced processing cost per invoice
- Faster post-acquisition integration
- Finance team efficiency

Billing accuracy

- 3–8% average spend recovery
- Improved EBITDA
- Reduced write-offs
- Financial compliance confidence

Efficiency

- 50–70% reduction in invoice processing time
- Redeployment of IT staff to strategic initiatives
- Improved AP cycle efficiency

Mitigate risk

- Reduced outage risk
- Revenue protection
- Customer experience protection
- Executive risk visibility

Dispute & compliance

- Reduced audit risk
- Faster dispute resolution
- Improved financial controls
- Stronger SOX compliance
